

SALMAN ABDULLAH ABDO AHMED

Taiz, Yemen | alamersalma1@gmail.com | +967 776071221 | <http://www.linkedin.com/in/salman-abdullah-ahmed>

PROFESSIONAL SUMMARY

Information Technology graduate (July 2025) with proven, hands-on experience in the full Software Development Life Cycle (SDLC). Specialized in Backend development (Laravel) and Web Design, with strong experience in AI & Data Mining projects (Python, SAS Viya, YOLOv8). Seeking an opportunity to apply my diverse technical skills and contribute to a challenging work environment.

TECHNICAL SKILLS

- **Programming Languages:** Python, PHP, Java, C#, JavaScript, HTML, CSS, Scala
- **Backend Development:** Laravel, Django, Flask, RESTful API Design, Java, C#
- **AI & Data Analytics:** YOLOv8, OpenCV, Neural Networks, SAS Viya, Apache Spark, Apache Pig (ETL Pipelines), Scalability
- **Databases:** SQL Server, Oracle, MySQL, MongoDB (NoSQL)
- **Frontend & Mobile:** HTML, CSS, JavaScript, Flutter, Java (Android Development)
- **DevOps & Tools:** Docker, Git, GitHub, Composer, Jira, Railway, InfinityFree, Visual Studio Code, MS Project, Postman
- **General Skills:** Microsoft Office, Computer Proficiency, Software Engineering Fundamentals, Basic Networking

PERSONAL SKILLS

- **Problem Solving & Thinking:** Problem-solving, Critical thinking, Creative thinking, Analytical skills, Strategic thinking
- **Project Management:** Project planning, Project coordination, Change management, Program lifecycle, Agile Waterfall methodologies
- **Collaboration & Communication:** Teamwork, Working under pressure, Adaptability, Effective communication, Task organization

PROFESSIONAL EXPERIENCE

Freelance Software Engineer & Technical Consultant

Remote | Jan 2022 – Present

- **Software & Web Solutions:** Delivered full-stack web projects using Laravel, PHP, and diverse software applications using Python, Java, & C#.
- **Mobile Development:** Developed native Android (Java) applications focusing on performance and functional UI/UX.
- **System Analysis & Management:** Managed project lifecycles using Jira & MS Project, and designed comprehensive system architectures using UML & ERD.

AI & Computer Vision Engineer (Final Year Project)

Taiz University | Dec 2024 – Jul 2025

- **Real-Time Face Monitoring:** Engineered a multi-camera security system using YOLOv8 and OpenCV, optimizing detection accuracy with SVM and Dlib.

PROJECTS

Human Resources Management System (HRMS)

- **Technologies:** Python, Flask, MySQL, SQLAlchemy, Bootstrap 5, JavaScript.
- Developed a comprehensive HR platform to automate employee management, attendance tracking, and payroll processing.
- Implemented a secure Role-Based Access Control (RBAC) system to manage permissions for Admins, Managers, and Employees.

- Built a dynamic payroll engine that calculates salaries, allowances, and deductions, with automated PDF payslip generation.

Saudi Metro Booking System

- Technologies: HTML5, CSS3, JavaScript (ES6+), LocalStorage.
- Developed a modern, responsive web application for metro ticket booking, featuring trip search and dynamic itinerary management.
- Implemented comprehensive accessibility features (A11y), including high-contrast modes, font resizing, and ARIA labels to support users with disabilities.
- Built a client-side data management system using LocalStorage to securely persist user bookings and preferences without a backend.

FlexIQ - Smart Gym Management System

- Technologies: Laravel, PHP, MySQL, Tailwind CSS, Alpine.js, Google Gemini API.
- Developed a modern, full-stack fitness management platform using Laravel, featuring a responsive RTL interface optimized with Tailwind CSS and Alpine.js.
- Integrated Google Gemini AI via RESTful APIs to power an intelligent fitness assistant that provides personalized workout advice and nutrition guidance.
- Engineered a complex multi-role ecosystem (Admin, Trainer, Member) to handle real-time class scheduling, subscription tracking, and the management of custom workout plans.

AnnouncementApp - E-Commerce Android Application

- Technologies: Java, Android SDK, Firebase (Auth, Database), SQLite, Google Maps API.
- Developed a native Android marketplace application using Java, allowing users to list products, manage profiles, and interact via direct calling.
- Implemented a robust offline-first architecture using SQLite for local caching, ensuring seamless data synchronization with Firebase once internet connectivity is restored.
- Integrated Google Maps API for location-based product visualization and applied Material Design principles for a modern, intuitive user experience.

Healthcare Stroke Risk Analysis

- Technologies: Python, Pandas, Scikit-learn, Matplotlib, Seaborn, SciPy.
- Conducted a comprehensive data science study on 5,110 patient records to identify critical stroke risk factors using statistical tests (Chi-square, T-tests).
- Developed and evaluated Machine Learning models (Logistic Regression, Random Forest) to predict stroke occurrence based on medical and lifestyle features.
- Generated insightful visualizations to correlate demographics with health risks, highlighting age and hypertension as primary predictors.

Najran University Technical Support System

- Technologies: PHP, MySQL, JavaScript, HTML5, CSS3.
- Developed a dedicated helpdesk solution for Najran University using PHP and MySQL, facilitating efficient ticket tracking and resolution workflows.
- Implemented a secure three-tier access system (Admin, Technician, Client) with custom dashboards, priority management, and file attachment capabilities.
- Designed a comprehensive Knowledge Base module and a responsive RTL interface to enhance user self-service and accessibility across devices.

Darek Real Estate Platform

- Technologies: PHP, MySQL, Bootstrap 5, JavaScript, Chart.js.
- Developed a comprehensive real estate marketplace using PHP and MySQL, facilitating property sales and rental operations.
- Implemented advanced search filters and a digital contract management system to generate and print rental agreements dynamically.
- Engineered a secure multi-role architecture (Admin, Owner, User) with interactive dashboards for tracking revenue, managing listings, and exporting reports.
- Designed a fully responsive, mobile-first user interface using Bootstrap 5, ensuring optimal accessibility and performance on all devices.

AI-Powered Plant Disease Detection System

- Technologies: Python, Django REST Framework, PyTorch, CNN, MySQL, Redis, Celery, AWS S3.
- Developed a deep learning-based diagnosis engine using PyTorch and custom CNN architectures to detect plant pathologies for various crops with high confidence scores.
- Engineered a robust backend API using Django REST Framework (DRF), integrating Celery and Redis for asynchronous background tasks and real-time notification dispatching.
- Implemented secure JWT authentication and OAuth2 social login, alongside a gamification system (points, leaderboards) to drive community engagement.
- Designed a scalable infrastructure utilizing AWS S3 for media storage and MySQL for relational data management.

EDUCATION & CERTIFICATIONS

Taiz University Bachelor of Science in Information Technology Engineering	Taiz, Yemen July 2025
Project Initiation: Starting a Successful Project Google (via Coursera)	Jul 2025
Foundations of Project Management Google (via Coursera)	Jun 2025
SQL and Relational Databases 101 IBM via Cognitive Class	Apr 2025
Solving Problems with Creative and Critical Thinking IBM via Coursera	Apr 2025
